Press Release...for immediate release

The Lumen Rooflight has a green outlook

The heritage property market can improve their energy efficiency rating whilst reducing their carbon footprint with The Lumen Rooflight.

Manufactured in Britain, The Lumen Rooflight replicates a traditional Victorian design whilst offering the highest specification of modern glazing.

The Lumen Rooflight complies with BS6375:Part1:2004 for air permeability, watertightness and wind resistance and provides a conservation design solution which is energy efficient and aesthetically appealing. The double glazed units are designed to cut heat loss through windows by half and offer all the benefits of argon gas and toughened glass.

As well as reducing heat loss, the steel rooflights that incorporate Pilkington K Glass and Pilkington Activ™ self clean, and let in vast amounts of natural light which can reduce electricity bills. To double the amount of natural light, The Lumen Rooflight 'Extra Light' has an interlocking design that reduces the amount of visible steel framework between casements.

Specially designed to sit flush, The Lumen Rooflight boasts a low profile which is unobtrusive and sensitive to the architecture of the property. Its attention to detail and fine lines of steel meet the requirement of conservation regulations.

As a commitment to the environment and economy, The Lumen Rooflight is manufactured in Britain. This quality conservation rooflight is just one of

the heritage products designed and manufactured by Tuscan Foundry Products. ([Prices start at £359 + VAT](#))
